Abstract

A rectangular stela was found in the vicinity of Tell Heboua I by accident early 2020. The stela was uncovered 500 m to the west of the fortification walls of Heboua I, during a land reclamation project which is going on at the western vicinity of Tell Heboua I. Our well-trained guard Hassan al-Masody, recognized the limestone slab on top of the embankment of a small drainage canal. When turning this recognizable piece of stone, he found it to be decorated of a limestone stela. Inscribed materials that were discovered at Heboua area are still limited compared to the long history of the site and the extensive and continuous archaeological work done. This obviously due to the scarcity of the stone at this sandy remote area. In addition, every piece of stone in the North Sinai archeological sites was taken from its original place and reused along the history till now.

Keywords: Amun-Re, Criosphinx, Tell Heboua I, New Kingdom, votive Stela.
I. INTRODUCTION

The Criosphinx stela of Tell Heboua is one of the unique discoveries in Sinai [Map Nº.1]. The decoration of the stela represents an image of Amun-Re as a recumbent ram-headed lion «criosphinx» sniffing the lotus-flower. Amun-Re can be depicted as a man, ram, goose, criosphinx, and bark. The stela has no inscriptions, and it can be classified as a votive stela, which doesn’t contain an image of the donor, and, on which only a deity is represented.

II. DESCRIPTION

The newly discovered Stela is made of white limestone. The preserved shape is rectangular (47cm x 35cm x 4.5cm). It was found broken into two pieces from exactly the middle point, and it seems quite even and doesn’t look recent. It had no inscriptions on its surface.

The stela was discovered in a bad state of conservation with a small crack recognized in the left lower part of the stela; first aid treatment was done at the site, and more work at the laboratory. Due to the high percentage of salt in the soil of Heboua area, crystallized salt covering the surface of the stela takes much time to be treated. The back of the stela is cragged and rough with several chiseled marks. The stela is decorated in sunken relief, the execution of the relief is very accurate, and gives more attention to details. The stela is registered and delivered to al-Qantara store magazine – North Sinai (Inv. Nº.557).

The decoration of the stela represents one main element which indicates an image of a recumbent ram-headed lion «criosphinx», with an offering stand in front [Figures 1-2]. The ram can be identified as Ovis platyura aegyptiaca, based on the forward-bending horns. The platyura ram, the pre-eminent sacred creature of Amun, became one of the most sacred animals in ancient Egypt through its association with the god Amun, who, as Amun-Re,
was the primeval deity and supreme god of the Egyptian pantheon. His crown symbolizes a sky-God, consisting of a crown surmounted by two high plumes.

The lion's body is depicted in a recumbent pose, lying straight with its paws resting flat and parallel to the axis of the carving, the tail curling forward around the rump and resting on the back. The carving combines marvelously the stylized divine wig, a long headdress with front lappets, with a naturalistic treatment of the body and short beard. In addition to symbolizing divinity, this wig had the virtue of adaptability; it fills out the back of the head in a manner suggestive of a mane. The muzzle projects realistically, with the almond-shaped eye, and short curling horns that curled around the bending ears. The headdress of the deity, the recumbent ram-headed lion identifies him as Amun-Re, the crown, is topped by two tall feathers «plumes» and a Solar Sun-disk at the center with Uraeus rising on his forehead, symbolic of his assimilation with the sun god, Re, as Amun-Re in the form of a ram-headed lion «Criosphinx».

Amun-Re can be depicted as a man, often enthroned, with deep blue skin and wearing double plumes, like a ram, a goose, a criosphinx, and bark. The composite animal was among the first of Egyptian artists' creations and continued for four thousand years as integral to art and religion. By combining the ram and lion, the procreative energy of one and the strength of the other were emphasized in the god Amun-Re. On the right part of the scene and before the Criosphinx is a water-pot «hs-vase» cooled by a Lotus blossom that rest on an altar, the Ram-headed god is sniffing the lotus-flower long stem. The water-pot «hs-vase» is frequently depicted on many offering stela, it was used to hold ritually purified water. The name «hs» means «favored», these containers were frequently left as tomb offerings so the deceased could drink the water and thus maintain a pure state throughout eternity.

III. CLASSIFICATION

The current stela has no text. It can be classified as a votive stela, which doesn’t contain an image of the donor, and, on which only a deity is represented. Missing the image or at least the name of the owner, these kinds of stelae would have been purposeless in a temple or as a «door plate» that would have been installed next to the entrance into the houses. There are some examples of votive stelae which contain no reference to their donor in either text or image, but, when a donor is depicted in either text or image or both, it is a conscious choice on the part of the donor to transform a stela from a solely religious votive object into a social object of self-presentation.

17 As regards social display, such stelae may have been set-up in homes. The donors may also have donated them in a community setting, but it is impossible to know if this is the case.
18 RYAN 2014: 17
All the stelae could not have had the same purpose; instead, temples, chapels, private houses, as well as tombs, must be considered as potential destinations\(^{19}\). There is remarkably little evidence regarding the actual creation of a votive stela; while royal stela often includes a message describing the circumstance under which a stela was created, votive stela does not\(^{20}\). Monuments and votive offerings representing only royal statues, or deities would have been rather exhibited in private houses, for instance as house altars such as those discovered at Amarna, Karnak, or Dair al-Medina. Such a destination can be supposed for Tell Heboua votive stela.

**The Role of Amun Regarding the Eastern Frontier**

Amun was a very important god to the new kingdom kings, as he played a significant military role regarding the campaigns beyond the Egyptian frontier; the gift of Amun to the kings has been nothing less than world dominion\(^{21}\). In the Book of the Dead Amun provides a potent spell for preserving the corpse and for preventing injury from a scorpion bite. The Egyptians at all levels of society, forced to undertake long journeys from home, put a certain amount of trust in the Amun as a protector of travelers\(^{22}\).

According to king Sety I’s triumphal return from campaigning in Levant, at the north exterior wall, great hypostyle hall, at Karnak temples\(^{23}\), on the opposite (western) side of the canal, the third unit shows the king at the end of the triumphal procession, presenting prisoners and booty to Amun-Re as a gift for his support and protection\(^{24}\). The excavation result from Tell el Borg-North Sinai, proved that the company that was part of the army division of *Amun* (perhaps 200-250 men) was based in the Eastern Delta, at Tell al-Borg\(^{25}\).

**IV. CONCLUSION**

The recumbent criosphinx appears in statuary under Tutankhamun\(^{26}\). Comparing it to other stelae, which depicted the criosphinx as the main figure\(^{27}\), and also regarding the dating of the architecture elements discovered at Tell Heboua\(^{28}\), The relevant criosphinx stela is believed to be dated to the end of the 18\(^{th}\) dynasty.
